

Marcos Vinícius Pedreira Vieira

Full Stack Developer - Node.js - React

viniciuspv.si@gmail.com | www.linkedin.com/in/vini-si12363 | +55(73)98825-1737 | github.com/vinisi12363

Professional Summary

Full Stack Developer with over 4 years of experience building web systems, high-performance APIs, and microservices-oriented distributed architectures. Strong experience with Node.js and TypeScript on the backend, with practical experience in asynchronous messaging (RabbitMQ, Kafka, AWS SQS/SNS), containerization (Docker, Kubernetes), and AWS cloud environments. Experience with React.js and Next.js in developing web systems in production. Committed to code quality through Clean Code, SOLID, TDD, and collaborative reviews, with observability guaranteed by Open Telemetry, Prometheus, and Grafana.

Technical Skills

Backend	Node.js, TypeScript, NestJS, Fastify, Express, APIs REST, GraphQL, WebSockets, PHP e Laravel.
Mensageria	RabbitMQ, Kafka, AWS SQS, AWS SNS — high-scale asynchronous systems
Cloud & Infra	AWS (EC2, S3, API Gateway, SQS, SNS), Docker, Kubernetes, VPS servers, Serverless
Banco de Dados	PostgreSQL, SQL, MongoDB (pipelines, vector), Redis (cache), TypeORM, Prisma
Observability	Open Telemetry, Prometheus, Grafana, Tempo, Loki, Jaeger — structured logs, metrics, distributed tracing.
Frontend	React.js, Next.js, Angular, TanStack Router/Query, Zustand, Redux, Tailwind, shadcn/ui, Responsive Design.
Devops/CI/CD	GitHub Actions, Docker Compose, automated pipelines (build → test → deploy)
Security/Auth	OAuth2, JWT, Auth Cookies strategy, sensitive data encryption, HttpOnly cookies, XSS/CSRF prevention
Best Practices	SOLID, Clean Code, TDD, BDD, Jest, React Testing Library, SonarQube, ESLint, BiomeJS

Positions and Experience

Full Stack Developer - GESEC

Jan/2025 – Present

Development of an IoT access control platform with real-time synchronization between cloud and physical devices (turnstiles, alarm centers, NVR, VMS) distributed in condominiums, schools, government agencies, and commercial buildings.

- ▶ Architected and developed the entire observability ecosystem for the infrastructure, which runs in a hybrid Cloud and Local setup.
- ▶ Performed integrations with various types of ONVIF and certified IoT equipment.
- ▶ Designed the system focusing on low latency and high availability: multi-tenant architecture via contractor entity, implementing messaging services between the Cloud server and customers' local servers.
- ▶ Implemented encryption for sensitive data before persistence in the database, ensuring compliance with information security requirements, with limited visibility for each profile type that accesses the administrative panel.

Stack: Node.js, TypeScript, Next.js, WebSocket Mtls, Kubernetes, Docker, Cloudflare, PostgreSQL, AWS

Full Stack Developer - GrowTech (Grow & Scale)

Jun/2025 – Present

At GrowTech, I am a full stack developer responsible for delivering web projects, from requirement analysis to deployment. So far, over 7 projects have been successfully delivered in production. Below, I highlight two success cases that I had the opportunity to design and develop completely, from scratch to deployment.

- ▶Löwe - Architected and developed a complete system for data traffic analysis and generation of marketing-focused suggestions, using agentic models specialized by niche. Used React 19, Vite, and TypeScript on the frontend and NestJS on the backend, with a vector database and RAG techniques for query optimization and insight generation.
- ▶Seguro Auto - Implemented a web application for the automotive insurance industry, integrating with several insurers in a modular way, facilitating expansion. Performed integration with Zoho CRM for complete tracking of quotes at all stages. Designed the system for low latency and high stability in the vehicle quoting flow using NestJS, TypeScript, and Server-Sent Events (SSE), improving the user experience. Developed robust connectors for REST APIs and legacy systems via SOAP.

Stack: Node.js, TypeScript, Next.js, WebSockets, Docker, Cloudflare, PostgreSQL, AWS .

Technical Lead and Full Stack Developer - Grupo Sideral

Jul/2024 – May/2025

For Grupo Sideral, I started as a full stack developer and progressed to leading the development team. I was responsible for the migration of a large digital product, maintaining data integrity and functionality for multiple frontends.

- Technical leadership in the migration of the legacy core system: I created a new architecture, documented standards and project rules, managed the development team, and planned the entire data migration between servers to accommodate the new architecture.
- Optimization of PHP API for a more robust architecture capable of serving multiple platforms (web and mobile)

Stack: Laravel (legacy), Next.js, PHP, CloudFlare, VPS Clouds and GCP.

Full Stack Developer - Intentus Consultoria

Aug/2024 – Nov/2024 - Freelancer

For Intentus Digital Consultoria, I developed a full stack web system as a freelancer, a robust and well-crafted application for a tourism company.

- End-to-end web application development using Next.js, Nest.js, Prisma and PostgreSQL.

Stack: Next.js, Nest.js, Docker, PostgreSQL and Prisma.

Full Stack Developer - Uno Clínica

Jun/2023 – Aug/2024

- Complete UI/UX optimization of the React JS web application, using more modern and robust tools such as MUI and Reactstrap, in addition to Redux.
- Optimization of monolith backend in Java to a microservices structure with Java Spring Boot and MongoDB.

Stack: React js, Java, Docker, Mongo DB.

Full Stack Developer - Freelancer

May/2022 – Feb/2023

Stack: React js, Node Js, Docker, Mongo DB.

Academic Education

Bachelor's Degree in Information Systems - UESB – State University of Southwestern Bahia (2013-2017).

Fullstack Web Development Course (1500hrs) - Driven Education - 09/2022 - 10/2023.

Languages

English Mid Level
